

BigBasket Sales Dashboard

■ Business Requirement

BigBasket stakeholders (sales managers, inventory teams, category managers, and business analysts) require an interactive dashboard to monitor product sales, outlet performance, and customer-related insights across different business dimensions.

The dashboard should provide a consolidated overview of sales performance, outlet analysis, product categories, and customer ratings to support faster business decision-making.

Dashboard Requirements

- Track KPIs such as Total Sales, Average Sales, Average Rating, and Number of Items.
- Analyze Sales by Outlet Type, Outlet Size, and Outlet Location.
- Compare Item Fat Content and evaluate its contribution to total sales.
- Identify top-performing product categories based on sales and ratings.
- Analyze outlet establishment trends by year.
- Provide detailed product-level insights including Item Type, Visibility, Weight, and Sales.
- Enable business users to identify underperforming outlets and products.
- Support data-driven decisions for inventory planning and sales optimization.

■ Problem Statement

Currently, BigBasket's raw sales data is stored in spreadsheets and transactional records, making it difficult for stakeholders to monitor performance and derive actionable insights quickly.

The key business problems addressed by this dashboard include:

No centralized KPI monitoring → The dashboard provides a single view of sales, ratings, and item performance.

Difficulty in outlet performance analysis → Visual reports help compare outlets by type, size, and location.

Limited visibility into product categories → Stakeholders can identify high-performing and low-performing item categories.

Challenges in identifying sales trends → Trend analysis highlights outlet establishment growth and sales patterns.

Manual reporting consumes time → Automated dashboards reduce manual effort and improve reporting efficiency.

Decision-making gaps → Business teams can make informed decisions regarding product placement, inventory management, and sales strategies.
